

Make Sure You Have the Correct Encounter

In clinic, the easiest way to do this is to open the patient chart by clicking on their name on your schedule.

On Labor and Delivery/Postpartum or in the ED, the easiest way is to open the patient's chart from the tracking shell.

Double check in the banner bar that you have the correct encounter type.

Discontinue Orders after Delivery or Surgery

In Cerner, orders carry through when the patient is transferred to a different level of care.

When we write post-delivery or post surgery orders, we will need to discontinue ALL antepartum orders that you do not want continued after the patient delivers and all pre-surgery orders that you do not want continued after surgery.

Do this by right clicking on your Powerplan in the order section. Make your life easier by adding any new individual orders to the admit Powerplan (click +Add to Phase and not +Add). Any orders added individually will need to be discontinued individually.

Double Check that Orders Have Been Signed and Initiated (When Appropriate)

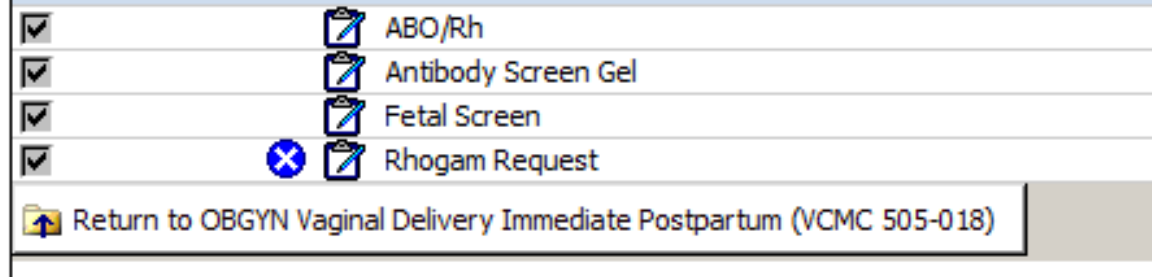

Powerplans signed and not initiated will say planned next to the Powerplan name. Powerplans that have been initiated will display in BOLD. If the name of the Powerplan is not in bold, they are not initiated.

Order Postpartum Rhogam in the Subphase

Postpartum Rhogam should be ordered within the LAB Postpartum RhIG subphase (which you will find in the post vaginal delivery and post csection ordersets).

DO NOT order these separately. You need to order ALL of these orders.

The patient needs to be drawn again for the type and screen even if they were just drawn at admission (per blood bank).

Attending Attestation on a Note in IView or AdHoc Documentation

There is no way to add an attending attestation to an iView prenatal care visit note or an AdHOC note (new OB, pediatric health maintenance). For these visits:

1. The resident can complete an Antepartum Follow-up note (Powernotes) or other appropriate Powernote or Dynamic Doc note and send the supervising for endorsement, the attending can add their attestation to the note as an addendum.
2. If an additional note is not needed, the resident can complete a free text note in Dynamic Docs that says something like "See note in IView" (or the name of the Ad Hoc note) and send that note to the attending for endorsement. The attending can add their attestation to that note.
